CutRecall - *Know-how memory for cutting processes*

The Know-how data base *CutRecall* consistently increases the performance of the GL, TL and LFC series of ARISTO Cutters.

New work processes can be set up more quickly and the efficiency increased.

The data save takes place dialog-controlled after a process run. Retrieving a file for a further process is merely a mouse click.

- ✓ Data base for your know-how
- ✓ With „new plot" set up more quickly
- ✓ Automatic data save
- ✓ Setup per mouse click

With *CutRecall* the complex material and process specific parameter settings are saved. Data retrieval for a work process takes place as fast as lighting. Manual input and typing errors are avoided, setup times reduced and the know-how remains retained.

Data save

Saving and sorting of new plot parameters according to categories (displays, packaging, ...)

Data search

Quick finding of saved plot parameters and direct transmitting to *CutterControl-Panel*.

Data edit

Overview/control the settings. Entries can be edited and over written.
